EXPERIENCE

Senior Web Designer & Developer | Entertainment
2012–Current

While with Entertainment, I've focused on interactive design including; designing, developing and prototyping multiple Apps, designing and building Shopify stores and blogs, Wordpress sites, Bootstrap websites, responsive emails and reusable Mailchimp templates and a number of other one-off front-end development projects. As for non-interactive design, I've created banner ads, social media posts, product launches, logos, brochures, in-store displays.

Developer | Brand Labs
2012–2013

My time at Brand Labs was spent building custom Volusion based stores, landing pages, email campaigns and blogs using a mix of HTML, CSS and jQuery. My experience as both a developer and designer lead to an additional lead role as a liaison between departments in order to foster better communication.

Senior Web Designer & Developer | Identity
2007–2012

During my 5 years at Identity, I designed and built all many websites, both with CMS systems like Wordpress and with vanilla HTML and CSS, email campaigns and ads, as well as non-web related print items such logos, brochures, business cards, etc.

Designer | Priority Health
2007

As part of Priority Health's marketing department I was involved in numerous print based projects, included patient forms, award dinner invitations, information books and posters.

Designer | Big Communications
2005–2006

Big's focus was almost entirely on Flash based interactive motion design. Other work included logo designs, production graphics, and various print work.

Freelance
2002–2018

I've done a variety of freelance jobs. Including, but not limited to website design, construction and maintenance, t-shirts, album design/packaging, posters, interactive design, forms, booklets, brochures, DVD packaging and more. I've partnered with bands, design agencies, teachers, screen printers and PR companies.
